定位词选取原则：(1)排除复现信息 the presence of peers、peer influence；(2)优先选择具有区分度的人物名称、身份职位等专有名词，如 Steinberg、Some experts；(3)补充选取易于区分的细节信息(即各题区别于其他题所独具的细节)。

解题思维原则：快速阅读时，带着试题定位词迅速浏览文中段落，一旦发现某题定位词(全部而非部分)现于某段(或复现、或同义、或转述等)，随即将该试题核心义与定位词对应处所示核心文意进行比对，若比对成功即可确定答案(正确答案往往是对原文定位处的同义复现或改写，偶尔可能是几个句子的文意概括或段落主旨概括)；若段落中没有发现任何定位词对应信息、或只发现某试题部分而非全部定位词对应信息，则无需进行文意比对也可直接将之排除(定位词无对应或只是部分对应表明文意肯定有缺失)。短时记忆有限者，这一解题过程可分批进行，比如先分析 5 道题然后速览全文，接着分析剩下 5 道题并匹配剩余未确定段落。

Peer Pressure Has a Positive Side

[A] ❶Parents of teenagers often view their children's friends with something like suspicion. [41] ❷They worry that the adolescent peer group has the power to push its members into behavior that is foolish and even dangerous. ❸Such **wariness**① is **well founded**②: statistics show, for example, that a teenage driver with a same-age passenger in the car is at higher risk of a fatal crash than an adolescent driving alone or with an adult.

[B] ❶In a 2005 study, psychologist Laurence Steinberg of Temple University and his co-author, psychologist Margo Gardner, then at Temple, divided 306 people into three age groups: young adolescents, with a **mean**③ age of 14; older adolescents, with a mean age of 19; and adults, aged 24 and older. ❷**Subjects**④ played a computerized driving game in which the player must avoid crashing into a wall that **materializes**⑤, without warning, on the roadway. ❸Steinberg and Gardner **randomly**⑥ **assigned**⑦ some participants to play alone or with two same-age peers **looking on**⑧.

[C] ❶Older adolescents scored about 50 percent higher on an index of risky driving when their peers were in the room—and the driving of early adolescents was

同侪压力有积极一面

青少年的父母常以某种类似怀疑的眼光来看待自己孩子的朋友。他们担心青少年同辈群体有能力逼其成员做出愚蠢甚至危险行为。这种警惕有充分理由：例如，统计数据显示，车上带有同龄乘客的青少年司机比单独驾车或带有成年人乘客的青少年司机遭遇致命车祸的风险更高。

在 2005 年一项研究中，天普大学心理学家劳伦斯·斯坦伯格及其合著者，当时任职于天普大学的心理学家马戈·加德纳，将 306 人分为三个年龄组：年幼青少年，平均年龄 14 岁；年长青少年，平均年龄 19 岁；成年人，年龄 24 岁及以上。受试者玩一款电脑驾驶游戏，游戏中玩家必须避免撞上毫无预兆、突然出现在车道上的一堵墙。斯坦伯格和加德纳随机指派一些参与者单独玩、或有两名同龄同伴在旁观看。

fully twice as **reckless**⑨ when other young teens were around. ❷ In contrast, adults behaved in similar ways regardless of whether they were on their own or observed by others. [37] ❸"The presence of peers makes adolescents and youth, but not adults, more likely to take risks," Steinberg and Gardner concluded.

[D]❶Yet in the years following the publication of this study, Steinberg began to believe that this interpretation did not **capture**⑩ the whole picture. ❷ As he and other researchers examined the question of why teens **were** more **apt to**⑪ take risks **in the company of**⑫ other teenagers, they came to suspect that a crowd's influence need not always be negative. [43] ❸ Now some experts are **proposing**⑬ that we should take advantage of the teen brain's keen sensitivity to the presence of friends and **leverage**⑭ it to improve education.

在旁,年幼青少年的驾驶鲁莽程度则整整翻了一倍。相比之下,不管独自开车还是有人旁观,成年人的行为都没有什么不同。"同龄人在场让青少年,而非成年人,更可能冒险,"斯坦伯格和加德纳总结道。

然而,在这项研究发表后的几年里,斯坦伯格开始认为这种解读未能抓住全貌。当他和其他研究者探讨为何青少年在其他青少年陪伴下更倾向于冒险这一问题时,他们开始怀疑群体的影响并不一定总是负面的。现在,一些专家提出,我们应该利用青少年大脑对朋友在场的高度敏感来改善教育。

[G]❶The results: Teens who played the Iowa Gambling Task under the eyes of fellow adolescents engaged in more **exploratory**⑦ behavior, learned faster

在 2011 年一项研究中,斯坦伯格及其同事转而使用功能性磁共振来研究同龄人在场如何影响青少年大脑活跃度。他们扫描了 40 位正在玩虚拟驾驶游戏的青少年和成年人的大脑,这个游戏旨在测试玩家在黄灯时会刹车、还是会加速冲过十字路口。

与独处时相比,在被同龄人观察时,青少年大脑与奖励相关的两个区域表现出更高的活跃度,而成年人大脑无此表现。换言之,当青少年与同龄人共处时,奖励感更加强烈,这激励他们去寻求可能带来巨大回报的高风险体验(比如正好在交通信号灯变红之前冲过路口所带来的兴奋)。但是斯坦伯格怀疑,这一倾向性也有其优点。在其 8 月在网上公布的最新一次实验中,斯坦伯格及其同事利用一个名为"爱荷华赌博任务"的电脑版纸牌游戏调查同龄人在场如何影响年轻人搜集和应用信息的方式。

结果是:与独自玩"爱荷华赌博任务"的青少年相比,在同伴注视下玩此游戏的青少年行为探索性更强,从正面

[H][36] ❶ Matthew D. Lieberman, a social **cognitive**① **neuroscientist**② at the University of California, Los Angeles, and author of the 2013 book *Social: Why Our Brains Are Wired to Connect*, suspects that the human brain is especially **skillful at**③ learning socially **significant**④ information. ❷ He points to a classic 2004 study in which psychologists at Dartmouth College and Harvard University used functional MRI to track brain activity in 17 young men as they listened to descriptions of people while concentrating on either socially relevant **cues**⑤ (for example, trying to form an impression of a person based on the description) or more socially neutral information (such as noting the order of details in the description). ❸ The descriptions were the same in each condition, but people could better remember these statements when given a social motivation.

2013 年出版的《社交天性:人类社交的三大驱动力》一书作者、加利福尼亚大学洛杉矶分校社会认知神经系统科学家马修·D·利伯曼怀疑,人类大脑特别擅长学习具有重大社交意义的信息。他提到 2004 年一项经典研究,研究中达特茅斯学院和哈佛大学的心理学家利用功能性磁共振追踪 17 名年轻男性“边倾听人物描述、边关注具有重大社交意义的信息(如,试着在描述的基础上形成对某人的印象)或比较没有社交意义的信息(如,注意描述中细节信息的先后顺序)时”的大脑活跃度。每种情形下的描述都是相同的,但人们在被赋予社交动机时能更好地记住这些陈述。

[I] ❶ The study also found that when subjects thought about and later recalled descriptions in terms of their informational content, regions associated with factual memory, such as the medial temporal lobe, became active. ❷ But thinking about or remembering descriptions in terms of their social meaning activated the dorsomedial prefrontal cortex—part of the brain's social network—even as traditional memory regions **registered**⑥ low levels of activity. ❸ More recently, as he reported in a 2012 review, Lieberman has discovered that this region may be part of a distinct network involved in socially motivated learning and memory. [42] ❹ Such findings, he says, suggest that "this network can be **called on**⑦ to **process**⑧ and store the kind of information taught in school—potentially giving students access to a range of untapped mental powers."

这项研究还发现,当受试者想起并随后回忆起与信息内容相关的描述时,与事实记忆相关的区域,如内侧颞叶,变得活跃起来。但想起或记起与社交涵义相关的描述激活的是背内侧前额叶皮层——大脑社交网络的一部分——这时传统记忆区域呈现出低水平活跃度。更近些时候,正如利伯曼在 2012 年一篇评论中公布的那样,他发现这一区域可能是大脑某一独特网络的一部分,该部分涉及社交驱动型学习和记忆。他说,这样的发现表明“这一网络可以用来处理和储存学校里所教授的那种信息——这可能会让学生获得一系列尚未开发的心智能力”。

[J] ❶ If humans **are** generally **geared to**⑨ recall details about one another, this pattern is probably even more powerful among teenagers who are very **attentive**⑩ to social details: who is in, who is out, who likes whom, who **is mad at**⑪ whom. ❷ Their desire for social **drama**⑫ is not—or not only—a way of distracting themselves from their schoolwork or of driving adults crazy. ❸ It is actually a *neurological* (神经的) sensitivity, initiated by **hormonal**⑬ changes.

如果说人类普遍倾向于回忆有关彼此的细节,那么这一模式在青少年中间甚至更加强大,他们极其留心社交细节:谁加入了,谁退出了,谁喜欢谁,谁生谁的气。他们对于社交戏剧性事件的渴望不是——或者不仅仅是——一种分散他们对功课的注意力或是把大人逼疯的方法。这实际上是荷尔蒙变化引发的一种神经敏感。从进

[39] ❹Evolutionarily speaking, people in this age group are at a stage in which they can prepare to find a mate and start their own family while separating from parents and **striking out**⑭ on their own. ❺To do this successfully, their brain **prompts**⑮ them to think and even **obsess about**⑯ others.

化的角度来说,这个年龄段的人正处于这样一个阶段:他们一面与父母分离、自谋生计,一面可能准备寻找配偶并组建自己的家庭。为了成功做到这点,他们的大脑迫使他们考虑他人,甚至过于在意他人。

[44] ❼Research shows that when we absorb information in order to teach it to someone else, we learn it more accurately and deeply, perhaps in part because we are engaging our social cognition.

[L]❶And although anxious parents may not **welcome**⑨ the notion, educators could turn adolescent recklessness to academic **ends**⑩. ❷“Risk taking in an educational context is a vital skill that enables progress and creativity,” wrote Sarah-Jayne Blakemore, a cognitive neuroscientist at University College London, in a review published last year. ❸Yet, she noted, many young people are especially unwilling to take risks at school—afraid that one low test score or poor grade could **cost**⑪ them a spot at a **selective**⑫ university. [38] ❹We should assure such students that risk, and even peer pressure, can be a good thing—as long as it happens in the classroom and not in the car. [1362 words]

但是,我们的学校主要关注的是作为个体的学生。如果教育者反过来利用“青少年群体受强大外力驱使而从社交角度思考问题”这一事实,会发生什么呢?在《社交天性》一书中,利伯曼介绍了一些方法来实现这一点。历史和国语科目可以透过相关人物的心理驱动力来展示。因此,教育者可以从渴望让人刮目相看的角度来介绍拿破仑,或从寂寞忧郁的角度来介绍丘吉尔。自身人际互动性较弱的学科,如数学,可以通过团队解决问题和同辈辅导来获得社交性。研究表明,当我们为了教他人而汲取信息时,我们学得更准确、更深入,部分原因可能是我们在调动自己的社会认知。

而且,尽管焦虑不安的父母可能不接受这一观念,但教育者可以将青少年的鲁莽转化为教学目的。“在教育语境下,冒险是一项至关重要的技能,它成就进步和创意,”伦敦大学学院认知神经科学家萨拉·杰恩·布莱克莫尔在去年发表的一篇评论中写道。但是,她指出,许多年轻人极其不情愿在学校冒险——担心一次考试分数低或者成绩差就可能让他们失去择优录取学生的学校的一个席位。我们应该向这类学生保证,冒险甚至同侪压力都可能成为一件好事——只要它发生在教室里而非汽车上。
